

***AMENDMENTS TO THE CLAIMS***

Please amend the claims as indicated hereafter (where underlining “\_” denotes additions and strikethrough “-” or “[ ]” denotes deletions).

***Claims:***

1. (Currently Amended) A system for providing interactive media services comprising:  
  
memory for storing interactive program guide (IPG) configuration data that is  
  
used to determine an IPG channel listing characteristic where the channel  
  
listing characteristic comprises a predetermined number of channels  
  
presented concurrently; and  
  
logic configured to modify the IPG configuration data in response to a first user  
  
input requesting a change in the IPG channel listing characteristic.
2. (Original) The system of claim 1, where the memory is non-volatile memory.
3. (Original) The system of claim 1, where an IPG screen that is configured in  
accordance with the first user input is presented to a user in response to receiving a  
second user input.
4. (Canceled).
5. (Canceled).

6. (Currently Amended) A system for providing interactive media services comprising:  
memory for storing interactive program guide (IPG) configuration data that is used to determine an IPG time listing characteristic where the time listing characteristic is at least one of the following:  
a predetermined number of time listings presented concurrently  
and a predetermined coverage of a time listing; and  
logic configured to modify the IPG configuration data in response to a first user input requesting a change in the IPG time listing characteristic.
7. (Canceled).
8. (Canceled).
9. (Canceled).
10. (Original) The system of claim 1, where an IPG screen that is configured in accordance with the first user input is presented to a user via a display device.
11. (Original) The system of claim 10, where the display device is a television.

12. (Original) The system of claim 1, where the first user input is provided via a remote control device.
13. (Original) The system of claim 1, where the system is a client device.
14. (Original) The system of claim 13, where the client device is a digital home communication terminal (DHCT).
15. (Original) The system of claim 1, where the system is a server device.
16. (Original) The system of claim 15, where the server device is located at a headend.
17. (Currently Amended) A method for configuring a user interface, comprising:  
receiving a first user input requesting a change in an interactive program guide  
(IPG) channel listing characteristic where the channel listing characteristic  
comprises a predetermined number of channels presented concurrently;  
and  
modifying IPG configuration data stored in memory in response to receiving the  
first user input, where the IPG configuration data is used to determine the  
IPG channel listing characteristic.

18. (Original) The method of claim 17, where the first user input is provided via a remote control device.

19. (Original) The method of claim 17, further comprising:  
providing a user with an IPG screen that is configured in accordance with IPG  
configuration data that is modified in response to the first user input.

20. (Original) The method of claim 19, where the IPG screen is presented to a user in response to receiving a second user input.

21. (Original) The method of claim 20, where the second user input is received while the user is not being presented with an IPG screen.

22. (Original) The method of claim 19, where the IPG screen is presented to a user via a display device.

23. (Original) The method of claim 22, where the display device is a television.

24. (Canceled).

25. (Canceled).

26. (Currently Amended) A method for configuring a user interface, comprising:  
receiving a first user input requesting a change in an interactive program guide  
(IPG) time listing characteristic where the time listing characteristic is at  
least one of the following:  
a predetermined number of time listings presented concurrently  
and a predetermined coverage of a time listing; and  
modifying IPG configuration data stored in memory in response to receiving the  
first user input, where the IPG configuration data is used to determine the  
IPG time listing characteristic.
27. (Canceled).
28. (Canceled).
29. (Canceled).

30. (Currently Amended) A method for configuring a user interface, comprising:  
receiving a first user input requesting a change in an interactive program guide  
(IPG) channel listing characteristic, where the channel listing  
characteristic comprises a predetermined number of channels presented  
concurrently; and  
changing the IPG channel listing characteristic in accordance with the first user  
input.
31. (Original) The method of claim 30, where the first user input is provided via  
a remote control device.
32. (Original) The method of claim 30, further comprising:  
providing a user with an IPG screen that is configured in accordance with the first  
user input.
33. (Original) The method of claim 32, where the IPG screen is presented to a  
user in response to receiving a second user input.
34. (Original) The method of claim 33, where the second user input is received  
while the user is not being presented with an IPG screen.

35. (Original) The method of claim 32, where the IPG screen is presented to a user via a display device.
36. (Original) The method of claim 35, where the display device is a television.
37. (Canceled).
38. (Canceled).
39. (Currently Amended) A method for configuring a user interface, comprising:  
receiving a first user input requesting a change in an interactive program guide  
(IPG) time listing characteristic, where the time listing characteristic is at  
least one of the following:  
a predetermined number of time listings presented concurrently  
and a predetermined coverage of a time listing; and  
changing the IPG time listing characteristic in accordance with the first user  
input.
40. (Canceled).
41. (Canceled).

42. (Canceled).
43. (Currently Amended) A method for configuring a user interface, comprising:  
receiving a first user input identifying an interactive program guide (IPG) channel  
listing characteristic, where the channel listing characteristic comprises a  
predetermined number of channels presented concurrently; and  
providing the user with an IPG screen that has the characteristic identified via the  
first user input.
44. (Original) The method of claim 43, where the first user input is provided via  
a remote control device.
45. (Original) The method of claim 43, where the IPG screen is presented to a  
user in response to receiving a second user input.
46. (Original) The method of claim 45, where the second user input is received  
while the user is not being presented with an IPG screen.
47. (Original) The method of claim 43, where the IPG screen is presented to a  
user via a display device.
48. (Original) The method of claim 47, where the display device is a television.

49. (Canceled).

50. (Canceled).

51. (Currently Amended) A method for configuring a user interface, comprising:  
receiving a first user input identifying an interactive program guide (IPG) time  
listing characteristic, where the time listing characteristic is at least one of  
the following:  
a predetermined number of time listings presented concurrently  
and a predetermined coverage of a time listing; and  
providing the user with an IPG screen that has the characteristic identified via the  
first user input.

52. – 54. (Canceled).
